CONCEALED-HEAD SELF-CLINCHING STUDS AND STANDOFFS

PEM® concealed-head self-clinching studs and standoffs install permanently and promote smooth designs.

Concealed-head self-clinching studs and standoffs install permanently and promote smooth designs:

- Install permanently in steel or aluminum sheets as thin as .062" / 1.6 mm to provide strong and reusable threads for mating hardware in a wide range of assembly applications.
- Allow the side of the sheet opposite installation to remain smooth and unmarred.
- One side installation additionally serves to satisfy strict ingress protection (IP) requirements where the sheet must remain completely sealed from air, liquid, dust, gases or other potentially infiltrating elements.
- Only require a blind milled hole to the recommended size and minimum depth.
- Install using a PEMSERTER® press or other standard press.
- CFHC™ studs can be ordered to NAS63540/4 specifications.⁽¹⁾

Fastener drawings and models are available at www.pemnet.com.

Custom sizes are available on special order. [Contact us](#) for more information.

(1) To meet national aerospace standards and to obtain testing documentation, Type CFHC studs must be ordered using appropriate NAS63540/4 part number. Check our web site for a complete Military Specification and National Aerospace Standards Reference Guide (Bulletin NASM).

Look for the PEM® dimple trademark on studs and the PEM® "two groove" trademark on standoffs.

Custom sizes are available on special order.
[Contact us](#) for more information.

CHA™, CFHA™, CHC™ And CFHC™ Aluminum And Stainless Steel Studs

- CHA/CFHA studs are recommended for use in aluminum sheets HRB 50 / HB 89 or less.
- CHC/CFHC studs are recommended for use in steel or aluminum sheets HRB 70 / HB 125 or less.

- Style #1. Minimum thread length is equal to barrel length "L". Screw might not pass through shank end. Screws with lengths exceeding "L" should not be used or they may cause "jacking-out" of standoff from the sheet.
- Style #2. Screw might not pass through unthreaded end. Screws with lengths exceeding "F" should not be used or they may cause "jacking-out" of standoff from the sheet.
- Style #3. Blind.
- Blind mounting holes may be deeper than minimums except where sheet material is at or near minimum thickness. Fasteners should always be installed so the flange is flush with the surface of the sheet.
- If standoff is used as a bushing, the hole in attached part must not exceed "B" plus .020" / 0.51 mm.
- For more information on proximity to bends and distance to other clinch hardware, see [PEM® Tech Sheet C/L To Edge](#).

(1) HRB - Hardness Rockwell "B" Scale. HB - Hardness Brinell.

Installation

1. Mill a round blind hole to the correct minimum depth.
End mills available from PennEngineering. See chart.
2. Place fastener into anvil hole.
3. Place the mounting hole over the shank of the fastener.
4. With punch and anvil surfaces parallel, apply squeezing force until the flange is flush with the mounting sheet.

Installation Notes

- For best results we recommend using a HAEGER® or PEMSERTER® machine for installation of PEM® self-clinching fasteners. See our [website](#) for more information.
- Visit the [Animation Library](#) on our website to view the installation process.

End Mill Information

Double-ended, two-flute H.S.S. center-cutting end mills are available from stock.

PennEngineering does not manufacture center-cutting end mills, but we do keep a supply in stock for your convenience.
