

PEM® brand RT™ free-running locknuts have a thread form that creates a lock when clamp load is applied

S-RT™

**FREE-RUNNING
LOCKNUTS**

PEM® S-RT™ FREE-RUNNING LOCKNUTS

PEM® S-RT™ free-running locknuts are free-running until clamp load is induced. A modified thread angle on the loaded flank provides the vibration resistant locking feature.

- Screw turns freely until a clamp load is applied.
- Resistant to vibrational loosening.
- Back side of panel is flush or sub-flush for screw installation.
- Locking feature reusability is not affected by number of on/off cycles.
- Uses same mounting hole and installation tooling as standard S™ nut fasteners found in PEM® Bulletin CL.

The graph below represents the clamp load of the joint versus the amount of cycles during transverse vibration testing for an S-RT™ free-running locknut, a standard hex nut and a hex nut with a split ring lock washer.

Testing conditions:

Transverse vibration testing.

M6 thread size nuts, average of 30 pieces.

Clamp load applied using metric property class 10.9 screws.

Nuts tested until loss of clamp load or 2,000 cycles is reached.

PEM® S-RT™ FREE-RUNNING LOCKNUTS

MATERIAL AND FINISH SPECIFICATIONS

THREADS: Modified thread form on loaded flank. Will accept a maximum material 6g screw

FASTENER MATERIAL: Hardened Carbon Steel

FINISH⁽²⁾: Standard: ZI - Zinc plated, 5µm, colorless

Optional: ZC - Zinc plated, 5µm, yellow

FOR USE IN SHEET HARDNESS: HRB 80 (Hardness Rockwell "B" scale) / HB 150 (Hardness Brinell) or less

(1) For maximum performance, we recommend that you use the maximum shank length for your sheet thickness.

(2) See PEM [Technical Support](#) section of our website for related plating standards and specifications.

PEM® S-RT™ FREE-RUNNING LOCKNUTS

INSTALLATION

1. Prepare properly sized mounting hole in sheet. Do not perform any secondary operations such as deburring.
2. Place fastener into the anvil hole and place the mounting hole (preferably the punch side) over the shank of the fastener as shown in diagram.
3. With installation punch and anvil surfaces parallel, apply squeezing force until the head of the nut comes into contact with the sheet material.

INSTALLATION NOTES

- For best results we recommend using a PEMSERTER® press for installation of PEM self-clinching fasteners. Please check our website for more information.
- Visit the Animation Library on our website to view the installation process for [select products](#).

- (1) Published installation forces are for general reference. Actual set-up and confirmation of complete installation should be made by observing proper seating of fastener as described in the installation steps. Other performance values reported are averages when all proper installation parameters and procedures are followed. Variations in mounting hole size, sheet material, and installation procedure may affect performance. Performance testing this product in your application is recommended. We will be happy to provide technical assistance and/or samples for this purpose.

All PEM® products meet our stringent quality standards. If you require additional industry or other specific [quality certifications](#), special procedures and/or part numbers are required. Please contact your local sales office or representative for further information.

Regulatory [compliance information](#) is available in Technical Support section of our website. Specifications subject to change without notice. See our website for the most current version of this bulletin.
