RE: Presence of Radioactive material in PennEngineering supplied products

Dear Valued Customer,

PennEngineering takes great lengths to control and monitor our extensive value stream as we seek to provide product that is compliant on many levels.

To this end we have recently communicated, through our Supplier Quality Agreement standard (REV 3), the requirement of steel and related processing suppliers insuring through either testing or controls and via PO or certifications during shipments; that their product supplied to our manufacturing plants is free of radioactive material.

PennEngineering will track these submissions in our normal intake process and thus ensure all supplied products will have no means of harm due to the presence of radioactive material as supplied by us or our suppliers.

Respectfully,

Rocky Pinheiro, Ph.D.
Global Vice President of Quality, PennEngineering
