

SI[®] THREADED INSERTS FOR PLASTICS

SI[®] brand inserts employ press-in, molded-in, or heat/ultrasonic installation methods to provide strong, reusable, permanent threads in plastic.

NEW
Solid body
press-in inserts

SI® brand inserts employ press-in, molded-in, or heat/ultrasonic installation methods to provide strong, reusable, permanent threads in plastic.

- SI® inserts are typically specified in applications where strong, durable metal threads are required in plastic material, especially where frequent assembly and disassembly of the unit for service or repair is necessary.
- Applications for SI® products include: electronics (including wearables, smart phones and hand held devices), automotive, aerospace and defense, medical, transportation, industrial and recreational equipment.
- SI® inserts are available in brass, stainless steel and aluminum.
- SI® inserts are available in a large variety of ultrasonic / heat staking, molded-in or press-in types.
- Aluminum and stainless steel inserts for plastics offer lead-free alternatives to leaded brass typically used for brass inserts.
 - Lead-free inserts offer alternative to leaded brass to address environmental and end-of-life recycling concerns.
 - Aluminum inserts are approximately 70% lighter than brass equivalents and made from lead-free aluminum.
 - Stainless steel inserts are typically stronger than brass and may offer better protection from certain types of corrosive agents.
- **NEW compression limiters** for plastic assemblies.
- SI® microPEM® inserts provide threads as small as M1.

Lead-free, lightweight aluminum inserts.

Part Number Designation And Material And Finish Specifications

IU B - 440 - 2

Length Code (where applicable):

See individual product charts for actual corresponding dimensional lengths.

Thread Code:

Internal, ASME B1.1, 2B / ASME B1.13M, 6H (except where noted). For PPB, PFLB, and PKB inserts collapsed slot and burrs may cause prevailing torque while thread accepts class 3A/4h screw. See individual product charts for actual corresponding thread size.

Material Code:

B = Free-machining, leaded brass. Plain finish. Meets RoHS requirements.
 C = 300 series stainless steel. Passivated and/or tested per ASTM A380.
 A = Aluminum. Plain finish.

Type:

IU = Ultrasonic/thermal, tapered
 IUT = Ultrasonic/thermal, straight wall
 IUTF = Flanged, ultrasonic/thermal, straight wall
 IS = Ultrasonic/thermal, symmetrical
 MSI = microPEM®, Ultrasonic/thermal, symmetrical
 IB = Molded-in, blind threaded
 IBL = Molded-in, self-locking blind threaded
 IT = Molded-in, thru-threaded

STK = Molded-in, knurled
 IP = Press-in, solid body insert
 IPF = Press-in, flanged solid body insert
 NFP = Press-in, hexagonal
 PP = Press-in, thru-threaded
 PFL = Press-in, flange-head
 PK = Press-in, straight knurl

Featuring threads as small as M1.

microPEM®
FASTENERS

Insert drawings and models are available at www.pemnet.com

SI® Brand Compression Limiters

for plastic applications

Compression limiters are non-threaded inserts that are commonly used in applications where a compressive load is applied to a plastic assembly. The compression limiter strengthens the plastic and withstands the compressive force that is applied when a mating screw is tightened in the assembly. The integrity of the plastic is not compromised by the load that is applied.

- Custom designed in a wide range of sizes and profiles
- Available in brass, stainless steel, and lead-free aluminum
- Installed using ultrasonic, heat-staking or molded-in installation methods
- Available design types; flange-head, symmetrical, full diamond knurl and non-knurled symmetrical

Flange-head

Larger contact area provides high resistance to axial loads and eliminates direct contact of plastic with mating components. Can be used for all installation methods.

Symmetrical

Symmetrical design offers fast loading without the need to orientate the part. Can be used for all installation methods.

Full Diamond Knurl

Symmetrical design and uniform diamond knurl reduces the risk of sink marks. Can be used in mold-in installation.

Non-knurled Symmetrical

Symmetrical design with retention groove for use in automation and high-volume applications needing compressive load resistance. Can be used in mold-in installation.

Available Options

Installation Methods	Insert Design Types	Insert Materials	Finishes	Clearance Hole for Mating Screw Sizes:
Ultrasonic Heat Staking Molded-in	Flange-head Symmetrical Full Diamond Knurl Non-knurled Symmetrical	Aluminum, Brass	Plain	#2-56 through 5/16-18 and M2 through M8
		Carbon Steel	Zinc plated, 5µm, colorless	
		Stainless Steel	Passivated and/or tested per ASTM A380

Ultrasonic / Heat Staking Inserts

- Ultrasonic - Installed by pressing the insert into the mounting hole with ultrasonic insertion equipment while simultaneously applying a high frequency vibration. Frictional heat caused by the vibration melts the plastic surrounding the insert allowing easy insertion. When the vibration ceases, the plastic solidifies, locking the insert permanently in place.
- Heat Staking - Installed by pressing the insert into the mounting hole with a thermal press to melt the plastic surrounding the insert.

Molded-In Inserts

- Installed during the molding process, the inserts are located in the mold cavity by core pins. When the mold opens, the core pins are withdrawn leaving the inserts permanently encapsulated in the plastic section with only the threads exposed.
- Installing the inserts during the molding process eliminates the need for secondary steps or installation equipment.

Press-In Inserts

- Installed by simply pressing the inserts into pre-molded or drilled holes. Installation is accomplished using any standard press at any time during the production process.
- Eliminates the need for molding-in inserts.
- Eliminates the need for heat or ultrasonic equipment.

Ultrasonic / Heat Staking Inserts

Tapered Thru-Threaded, IUA™, IUB™ and IUC™ Inserts

- Designed for use in tapered holes.
- Tapered mounting hole allows for rapid and accurate alignment prior to installation.
- Aluminum inserts ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

Ultrasonic / Heat Staking Inserts

Now Available
Flanged Head Inserts

Flanged, Straight Wall, Thru-Threaded, IUTFA™, IUTFB™ and IUTFC™ Inserts

- Provides larger surface area and high pullout in reverse entry applications.
- Brass flange offers a contact surface for electrical connections.
- Flange helps distribute the load applied when fastening mating hardware.
- Self-aligning lead-in provides accurate alignment prior to installation.
- Aluminum inserts are ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

All dimensions are in inches.

(1) Thread tapped thru, Class 3A/4h screw must pass with finger torque, but basic go gauge may stop at last thread.

Ultrasonic / Heat Staking Inserts

microPEM® Symmetrical, Thru-Threaded, MSIA™ MSIB™ Inserts

- Threads as small as M1.
- Symmetrical design eliminates the need for orientation.
- Provides excellent performance in wide range of plastics.
- Aluminum inserts ideal for light weight designs.
- Aluminum inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

All dimensions are in millimeters.

- (1) The values reported are averages for ultrasonically inserted inserts when all installation specifications and procedures are followed. Variations in mounting hole size, sheet material and installation procedure will affect results. Performance testing of this product in your application is recommended. Samples can be provided for this purpose.
- (2) Torque-out performance will depend on the strength and type of screw being used. In most cases, the screw threads will fail before the insert threads. For testing purposes, inserts were installed using heat stake equipment into a flat sheet.

Molded-In Inserts

Blind Threaded, IBA™, IBB™ and IBC™ Inserts

- Blind-end protects the threads from plastic intrusion.
- Aluminum inserts ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

NOTE: Manufacturing techniques may leave a slight projection a maximum of .025" / 0.65 mm beyond the "A" dimension.

All dimensions are in inches.

N/A - Not Available.

(1) Minor diameter may be below minimum in deformed thread area.

(2) Locking torque values shown apply when the mating screw has thread class of 3A for unified sizes and class 4h for metric sizes and is made from 300 series stainless steel with no additive finish. Other screws may be used, but the locking torque may not comply with the values shown.

Molded-In Inserts

Thru-Threaded, ITA™, ITB™ and ITC™ Inserts

- Pilot diameter and undercuts allow plastic to flow into grooves providing high pullout resistance.
- Aluminum inserts ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

All dimensions are in inches.

(1) Thread tapped thru, Class 3A/4h screw must pass with finger torque, but basic go gauge may stop at last thread.

Molded-In Inserts

Thru-Threaded, Knurled, STKA™, STKB™ and STKC™ Inserts

- Uniform knurl diameter reduces the risk of sink marks.
- Available in varying lengths for injection molding assemblies.
- Aluminum inserts ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

Configuration for STKA/STKB/STKC-256-20 and -24

(1) The values reported are high and low ranges when all installation specifications and procedures are followed. Variations in mounting hole size, workpiece material and installation procedure will affect results. Performance testing of this product in your application is recommended. Samples can be provided for this purpose.

Press-In Inserts

Solid Body IPB™, IPC™ and IPA™ Press-in Inserts - NEW

- Each thread size in an appropriately sized body to conserve space
- Press-fit insert provides strong, reusable threads.
No heat or ultrasonics required
- Installs with a simple arbor press
- Sharp knurls cut into the material to provide torque resistance
- Retention fin / barb adds pullout strength
- Excellent for harder plastics including many thermoset resins

All dimensions are in inches.

Press-In Inserts

Hexagonal, NFPA™ and NFPC™ Inserts

- Offers increased levels of performance for applications with adequate space to accommodate the hex body
- Press-fit insert provides strong, reusable threads. No heat or ultrasonics required.
- Hexagonal “barbed” configuration ensures high torque-out and pullout values.
- Aluminum inserts ideal for light weight designs.
- Aluminum and stainless steel inserts offer lead-free alternative.
- Available in plated carbon steel upon request.

All dimensions are in inches.

(1) Thread tapped thru, Class 3A/4h screw must pass with finger torque, but basic go gauge may stop at pilot end.

Press-In Inserts

Thru-Threaded, PPA™ and PPB™ Inserts

- Press-fit insert with strong, reusable threads.
- No heat or ultrasonics required.
- Slotted insert compresses allowing easy access into the mounting hole.
- Aluminum inserts ideal for light weight designs.
- Aluminum inserts offer lead-free alternative.

All dimensions are in inches.

(1) Collapsed slot and burrs may cause prevailing torque while thread accepts class 3A/4h screw.

Press-In Inserts

Flange-Head, PFLA™ and PFLB™ Inserts

- Press-fit insert with strong, reusable threads. No heat or ultrasonics required.
- Flange-head eliminates direct contact of plastic with mating parts.
- Slotted insert compresses allowing easy access into the mounting hole.
- Aluminum inserts ideal for light weight designs.
- Aluminum inserts offer lead-free alternative.

All dimensions are in inches.

(1) Torque-out values: applied torque in counter-clockwise direction. The failure mode in all cases was the insert jacking out of the panel. The torque in clockwise direction will be equal or greater to this value.

If necessary our applications engineering department can assist you to design a custom component to satisfy your requirements. Below are a few examples.

Thin Sheet Studs

Provide external threads in material as thin as .125" / 3.175 mm. SI® studs are available in lengths from 1/4" to 3/4" / 6.35 to 19.05 mm in thread sizes #4-40 to 1/4-20 / M3 to M6. These inserts can be provided in aluminum, brass, steel and stainless steel and can be pressed into pre-molded or drilled holes.

Ultrasonic Studs

Tapered body provides easy insertion in pre-molded or drilled holes. They are available in lengths from 1/4" to 3/4" / 6.35 to 19.05 mm in thread sizes #2-56 to 1/4-20 / M2 to M6. These inserts can be provided in aluminum, brass, steel and stainless steel.

Self-Locking Ultrasonic Inserts

The self-locking feature prevents screw loosening and is advantageous in applications where vibration is present. They are available in thread sizes #2-56 to 1/4-20 / M2 to M6 and are designed for ultrasonic installation into straight or tapered holes.

Press-In Studs

Allows for mounting a component on external threads. Available in lengths from 3/16" to 1" / 4.76 to 25.4 mm. Thread sizes #4-40 to 1/4-20 / M3 to M6. SI® press-in studs are available in aluminum, brass, steel and stainless steel and can be installed into pre-molded or drilled holes without the use of heat or ultrasonics.

PEM® Varimount® Bonding Fasteners

- Laminate within composite layers.
- Mold into plastics.
- Surface bond to panels from front or back side.
- Available with studs, nuts, or standoffs to meet a variety of applications.

For more information, see [PEM® Bulletin VM](#).

Hole Preparation Guidelines

Thinner walls and bosses may be used but will affect performance.

Pullout

Pullout is the force required to pull the insert from the sheet.

Torque Out

Torque-out is the torque required to turn the fastener in the parent material after installation without inducing clamp load on the fastener.

Proper installation for SI® brand inserts

Incorrect

Inserts installed below the surface of the host plastic will be subjected to jack-out.

Incorrect

Inserts installed above the surface of the host plastic will not achieve optimal effectiveness.

Correct

Inserts should be installed flush or within .005" above the host plastic for the best performance.

Mating Component

To prevent jack-out, it is very important that the clearance hole of the mating component is sized correctly. The clearance hole should be larger than the assembly screw, yet smaller than the outside diameter of the insert so that the insert, not the host plastic, carries the compressive load. If the clearance hole must be oversized for misalignment purposes, a headed insert is recommended to increase the insert bearing area surface.

The diameter of the clearance hole in the mating component is very important. The insert and not the plastic must carry the load. The hole in the mating component must be larger than the outside diameter of the assembly screw, but smaller than the pilot or face diameter of the insert. This prevents jack-out. If a larger hole in the mating component is required for alignment purposes, a headed insert should be considered. Inserts should be installed flush (or no more than 0.13 mm (.005") above the hole).

Hole in mating part must be smaller than insert diameter in host to prevent the insert from pulling through the assembly – known as "jack-out."

[Threaded Insert Troubleshooting Guide](#)

Threaded Insert Troubleshooting Guide

Diagnostic Solutions for Optimal Installation Performance

ABOUT SI®
 SI® brand inserts provide strong, reusable, permanent threads in plastic assemblies across countless applications. Available in brass, stainless steel, and aluminum, SI inserts install via press-in, mold-in, or heat/ultrasonic installation methods.

How to Use this Guide:

- Have a problem? Jump to the related troubleshooting section
- Planning installation? Review the Pre-Installation Checklist
- Need quick answers? Use the Quick Reference Chart

PRE-INSTALLATION CHECKLIST

✓ **Hole Preparation**

- Diameter: +0.003/-0.000 tolerance (press-in); verify specs by insert type
- Depth: Meet minimum per product tables (see catalog)
- Boss diameter: 2x insert diameter minimum
- Wall thickness: Adequate to prevent cracking

✓ **Material & Insert Selection**

- Confirm plastic compatibility with installation method
- Thread size matches assembly requirements
- Insert length provides adequate engagement
- Material (brass/stainless/aluminum) suits application environment

✓ **Equipment Setup**

- Ultrasonic: Horn properly coupled; equipment tuned
- Press-in: Adequate force available; proper tooling
- Molded-in: Core pins sized correctly; proper mold temperature

PREVENTION TIP:

Most failures trace to incorrect hole size or inadequate boss design. Verify your hole prep specifications first.

TROUBLESHOOTING: MECHANICAL PERFORMANCE

Insufficient Pull-Out or Torque Strength

ROOT CAUSE: Inadequate plastic flow around insert retention features can be caused by insufficient energy, oversized holes, or inadequate depth.

SOLUTIONS:

<p>Ultrasonic/Heat-Staking:</p> <ul style="list-style-type: none"> • Increase weld time (0.1s/2 sec increments) • Increase amplitude (change booster ratio) • Decrease pressure (allows more plastic flow time) • Decrease down speed 	<p>All Methods:</p> <ul style="list-style-type: none"> • Verify hole is at minimum spec (not oversized) • Increase hole depth • Reduce screw length if bottoming out
--	--

QUICK FIX:
Oversized hole by 0.005" can reduce pull-out strength 30-40%. Check diameter first.

All specifications in this bulletin are presented as accurately and up-to-date as possible. We reserve the right to make changes to any information contained in this bulletin without notice.

We recommended that you test a particular product to be sure it is ideally suited to your application. We will be happy to provide samples for this purpose and our authorized distributors can also help you with your selection.

All PEM® products meet our stringent quality standards. If you require additional industry or other specific [quality certifications](#), special procedures and/or part numbers are required. Please contact your local sales office or representative for further information.

Regulatory [compliance information](#) is available in Technical Support section of our website. Specifications subject to change without notice. See our website for the most current version of this bulletin.
